

Serial No.: 09/000,924

data;

means for utilizing the linked and/or embedded input data by displaying the prepared data and the linked and/or embedded input data;

judging means for judging, using the generated information, whether the linked and/or embedded input data requires authorization for use; and

means for preventing storage of the linked and/or embedded input data in another storage means to prevent unauthorized use of the linked and/or embedded input data if the linked and/or embedded input data is judged to require authorization for use.

2. (FIVE TIMES AMENDED) The data protection system as claimed in claim 1, further comprising:

means for executing a cut and paste function with respect to the linked and/or embedded input data in the prepared data; and

71 means for preventing the cut and paste function to prevent unauthorized use of the linked and/or embedded input data when the linked and/or embedded input data requires authorization for use.

3. (FIVE TIMES AMENDED) The data protection system as claimed in claim 1, wherein said judging means includes means for judging whether the linked and/or embedded input data in the prepared data is encrypted that can be decoded by a predetermined decoding key; and

means for determining whether the linked and/or embedded input data requires authorization for use when the linked and/or embedded input data is encrypted.

P 4. (FIVE TIMES AMENDED) A data protection system for protecting input data requiring authorization for use against unauthorized use when the input data is processed, comprising:

means for storing input data, which can require authorization for use;

means for preparing data to create prepared data by linking the input data to, and/or embedding the input data in, the data using a compound document programming technique;

judging means for judging whether the linked and/or embedded input data requires authorization for use;

means for preventing storage of the linked and/or embedded input data in another storage means during processing of the linked and/or embedded input data in the prepared data when said linked and/or ~~embedded~~ input data has been judged to require authorization for use;

Serial No.: 09/000,924

and

71 storage means for storing process information indicating what kind of processing has been performed on the linked and/or embedded input data during the processing.

72 5. (FOUR TIMES AMENDED) The data protection system as claimed in claim 4, wherein said judging means includes means for judging whether the linked and/or embedded input data is encrypted that can be decoded by a predetermined decoding key; and

means for determining whether the linked and/or embedded input data requires authorization for use when the linked and/or embedded input data is encrypted.

73 6. (FIVE TIMES AMENDED) The data protection system as claimed in claim 4, wherein the process information is differential data indicating a difference between the linked and/or embedded input data and the linked and/or embedded input data after the processing.

74 7. (FOUR TIMES AMENDED) The data protection system as claimed in claim 4, further comprising:

means for displaying the linked and/or embedded input data and the process information as added to the linked and/or embedded input data.

8. (FOUR TIMES AMENDED) The data protection system as claimed in claim 4, wherein said storage means for storing process information includes means for adding information specifying the linked and/or embedded input data to the process information; and means for storing the added information.

75 9. (FIVE TIMES AMENDED) A data protection system for protecting input data requiring authorization for use against unauthorized use, comprising:

means for storing input data, which can require authorization for use;

means for permitting distribution of the input data to data processing means;

means for preparing data to create prepared data by linking the input data to, and/or embedding the input data in, the data using a compound document programming technique;

judging means for judging that the linked and/or embedded input data in the prepared data requires authorization for use;

means for preventing storage of the linked and/or embedded input data in another

Serial No.: 09/000,924

75 storage means during processing of the linked and/or embedded input data in the prepared data by the data processing means when said linked and/or embedded input data has been judged to require authorization for use; and

storage means for storing process information indicating what kind of processing has been applied by said data processing means.

76 12. (FIVE TIMES AMENDED) A data preparation device, comprising:

means for preparing data to create prepared data by linking input data to, and/or embedding the input data in, the data using a compound document programming technique, to generate information of the input data and to append the generated information to the prepared data, the input data requiring authorization for use and input from a center permitting use of the input data in exchange for a charge; and

means for utilizing the linked and/or embedded input data by displaying the prepared data and the linked and/or embedded input data.

13. (FIVE TIMES AMENDED) The data preparation device as claimed in claim 12, further comprising:

judging means for judging whether there is a license for utilizing the utilized linked and/or embedded input data in the prepared data; and

means for permitting the utilized linked and/or embedded input data to be displayed on said display means when judged that there is the license.

77 15. (FIVE TIMES AMENDED) A data processing device, comprising:

means for permitting distribution to data processing means input data requiring authorization for use in exchange for a charge;

means for processing the input data, which requires authorization for use;

means for preparing data to create prepared data by linking the input data to, and/or embedding the input data in, the data using a compound document programming technique; and

storage means for storing process information indicating what kind of processing has been applied by said processing means to the linked and/or embedded input data in the prepared data.

78 16. (FOUR TIMES AMENDED) The data processing device as claimed in claim 15,

Serial No.: 09/000,924

further comprising:

78 judging means for judging whether there is a license for utilizing the linked and/or embedded input data in the prepared data; and

means for permitting the processing of the linked and/or embedded input data when judged that there is the license.

79 18. (FOUR TIMES AMENDED) A data protection system for protecting input data requiring authorization for use against unauthorized use when the input data is processed, comprising:

an input unit inputting input data, which requires authorization for use;

a processing unit in communication with the input unit and applying processing to the input data, which is linked to, and/or embedded in, prepared data according to a compound document programming technique; and

a forbidding unit preventing storage of the linked and/or embedded input data during the processing of the linked and/or embedded input data.

710 20. (FIVE TIMES AMENDED) A data processing device, comprising:

a storage unit storing input data, which requires authorization for use;

a processing unit in communication with the storage unit and programmed to process the input data, which is linked to, and/or embedded in, prepared data according to a compound document programming technique, to produce differential data by comparing the processed linked and/or embedded input data with the linked and/or embedded input data in the prepared data, and to store the differential data in the storage unit.

711 22. (FOUR TIMES AMENDED) A system protecting input data requiring authorization for use against unauthorized use during utilization of the input data requiring authorization for use, comprising:

a storage unit storing input data, which can require authorization for use;

a preparation unit in communication with the storage unit and preparing data to create prepared data by linking the input data to, and/or embedding the input data in, the data using a compound document programming technique, to generate information of the input data and to append the generated information to the prepared data;

a data display processing unit in communication with the preparation unit and utilizing the

Serial No.: 09/000,924

prepared data by displaying the prepared data including displaying the linked and/or embedded input data;

a judging unit in communication with the data display processing unit and using the generated information to judge whether the linked and/or embedded input data requires authorization for use; and

a control unit in communication with the judging unit and preventing storage of the linked and/or embedded input data in another storage unit to prevent unauthorized use of the linked and/or embedded input data if the linked and/or embedded input data is judged to require authorization for use.

711 23. (TWICE AMENDED) A computer system protecting input data against unauthorized use during utilization of the input data, comprising:

a data creating unit creating a compound data with the input data using a compound document standard;

a displaying unit displaying the created compound data, including the input data; and

a forbidding unit forbidding storage of the input data to prevent unauthorized use of the input data in the created compound data based upon a determination, using information of the input data, that the input data requires authorization for use.

REMARKS

The elected pending claims are 1-18, 20 and 22-23. Further to a telephone conference with the Examiner on August 8 and 13, 2002, elected claims 1-9, 12-13, 15-16, 18, 20, and 22-23 have been amended, and, thus, elected claims 1-18, 20, and 22-23 remain pending for reconsideration which is requested.

No new matter has been added in this Amendment.

Claims 1-9, 12-13, 15-16, 18 and 20 have been amended to improve form regarding possible indefiniteness. In particular, the words "linked/embedded" is changed to "linked and/or embedded." The alternative expression "and/or" is not ambiguous or uncertain, thereby being definite. The expression "and/or" is not indefinite because the common meaning of this expression is either linked or embedded, or linked and embedded. A "compound document" can possibly have input data (1) linked, (2) embedded, or (3) simultaneously linked and embedded (three possibilities). See, for example, the attached definition of compound document, which describes that objects can be either embedded or linked. Further, the Applicants also assert that there may be a possibility that input data is embedded and linked in a simultaneous manner.
